

Flexineb is the ideal delivery device for use with Immuno San.

Testimonials

"My horse used to cough at the onset of work until I started to use Immuno-San regularly. It works when other products have failed"

"After a trip, my horse always had stuff coming out of his nose and my vet recommended Immuno-San. It has solved his problem completely! I will never go to a show without it"

Used by the Best!

Immuno-San has been used by 16 riders participating in the 2016 Olympics in Rio, including 6 medallist's!

It is also currently being used by 40 of the top 100 Showjumpers in the World Rankings!

Immuno-San is an effective natural solution designed specifically for nebulisation, which is FEI non-testing. Delivery is fast and efficient when used with Flexineb E2.

Help them breathe easily!

Better health, naturally

Designed specifically for use with Flexineb E2 nebulisers.

Used with **Flexineb[®] E2**
A Combined Solution for Competition Horses

Immuno-San is an inhalable solution specially formulated to support the respiratory system of performance horses. Completely natural and non-testing (FEI Legal), making it ideal for use in Competition horses.

Ideal for all horses recovering from respiratory illness, or those who want to prevent respiratory stress when travelling or regularly competing & exposed to virus'.

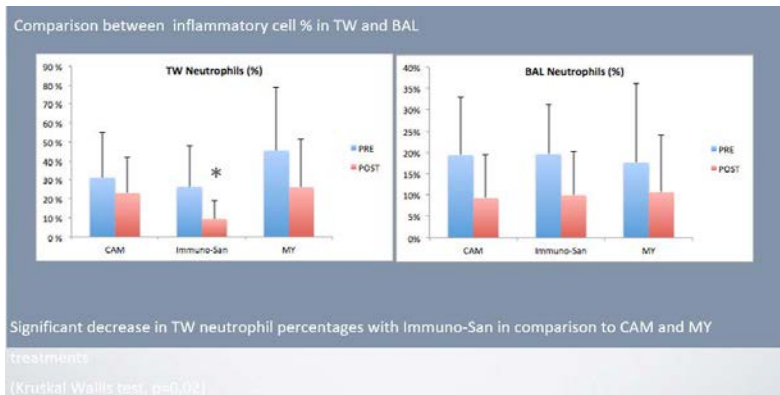

Immuno-San is a unique combination of high grade essential oils, scientifically proven to support the Immune System, and has demonstrated excellent results in clinical testing.

How Effective is Immuno-San?

Field Trial Study Courtesy of Dr Emmanuelle van Erck, DVM, PhD, ECEIM.

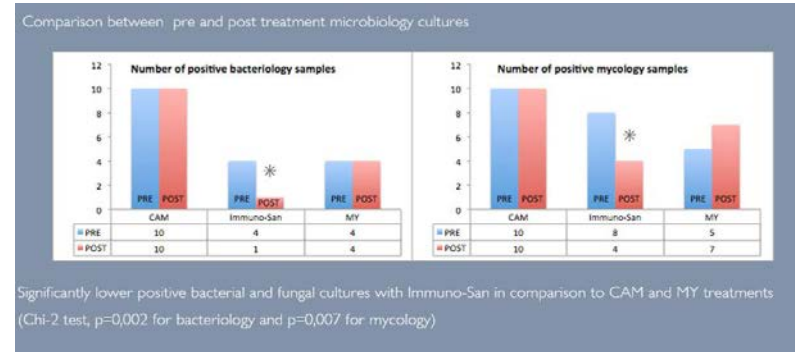

A recent study conducted on the efficiency of Immuno-San demonstrated significant reduction in TW & BAL neutrophils with Immuo- San (IS) use in comparison to other common combined therapies - Inhalable Corticoids & Anti Microbials (CAM) & other inhaled Essential Oil products (MY)

Results:

All horses showed a decrease in BAL neutrophils (i.e. indicative of lung inflammation), as expected with a corticosteroid treatment, however the decrease in TW neutrophils is significantly more important in horses receiving Immuno-San.

One of the reasons why neutrophils would remain above normal range in the TW is the persistence or the development of infectious micro-organisms. Indeed, use of corticosteroids can increase the risk of secondary bacterial or fungal infections.

Examining the results of the bacteriology and mycology cultures in all 3 groups, the combined treatment with Immuno-San demonstrated that it can prevent the development of infection in IAD horses treated with inhaled corticosteroids.

When is Immuno-San Prescribed?

For horses in work and competition, where horses are exposed to respiratory diseases such as IAD and infection, Immuno-San is a highly efficient and protective, non-doping solution. *(FEI)

- In horses treated with corticosteroids, Immuno-San acts to support the immune system and prevent infection
- Immuno-San helps support health and performance in equine athletes

Indications for use ImmunoSan

- ✓ Recovery from respiratory disease/infection
- ✓ Pro-longed recovery time
- ✓ Cough
- ✓ Nasal Discharge
- ✓ Exposure to Dust
- ✓ Travelling
- ✓ Fatigue
- ✓ Changes in breathing

Treatment

Using Flexineb E2, the treatment protocol is 5ml delivered twice daily, un-diluted via Flexineb. Be confident Immuno-San is reaching the lower respiratory tract, with Flexineb Scintigraphy imaging demonstrating 71% of particles reaching the lower airways.

Immuno-San is indicated as a 10 day treatment, repeatable as often as required but is ideal at the start of training & during intense training or travelling.
